

Phase Design Report 2

Andy Gonzalez, Arsenio Pena, Grismely Hiraldo, and Danny Jaramillo
<https://github.com/djara1214/Csc322-Project.git>

Introduction: Collaboration Diagram

0. **Email and card** information is entered from unregistered users in order to register.
1. **Unreg to reg**- Unregistered user becomes a registered user
2. **VB**- visitor can browse without creating an account
3. **Register screen info saved**- when registering a new user, their information is saved
- 4A. **Reg Check**- Information is checked for registered user
- 4B. **Reg Saved**- Information on user is saved
5. **Reg b**- registered user browsing products
6. **Prod sel**- Product selection
7. Unregistered user is asked to register
- 8a. **Inv s**- Inventory is searched for availability
- 8b. **Inv r**- inventory information is returned to order screen
9. **S to I**- supplier information and products saved to inventory data
- 10a. Product information is sent to checkout
- 10b. Order information is sent back to the customer.
- 11a. Product info is sent for bidding
- 11b. Shipping info is sent back
- 12 a. Bidding information is sent from shipping company

12b. **wib4**- What is bid for- Information is sent to shippers so they may know what they need to send and create bids accordingly.

13a. **bid 2 clerk**- Bidding information is sent to the clerk, for approval.

13b. **clerk 2 bid**- clerk's decision is sent back

14. a. **S rebuttal** – Complaint dispute from suppliers

14b. **Complaint to S**- Suppliers can see the complaint

15a. **Sh rebuttal** – Complaint dispute from shippers

15b. **Complaint to Sh**- Shippers can see the complaint

16. a. **C to M**- Complaint information is sent to manager

16b. **M to C**- Complaint information sent back after manager decisions and viewing.

17. **Managers to home**- Homepage top choices information from managers.

18. **Com avoid**- Avoid list is added to via complaint information.

19. A Complaint information is sent to the clerk.

19b. Clerk rebuttal is sent back.

20a. **reg deny**- Registration is denied if they are in the deny list.

20b. **Reg check**- Visitor's information is checked inside the avoid list

21. **Forum Comp**- Complaints made from forum chat.

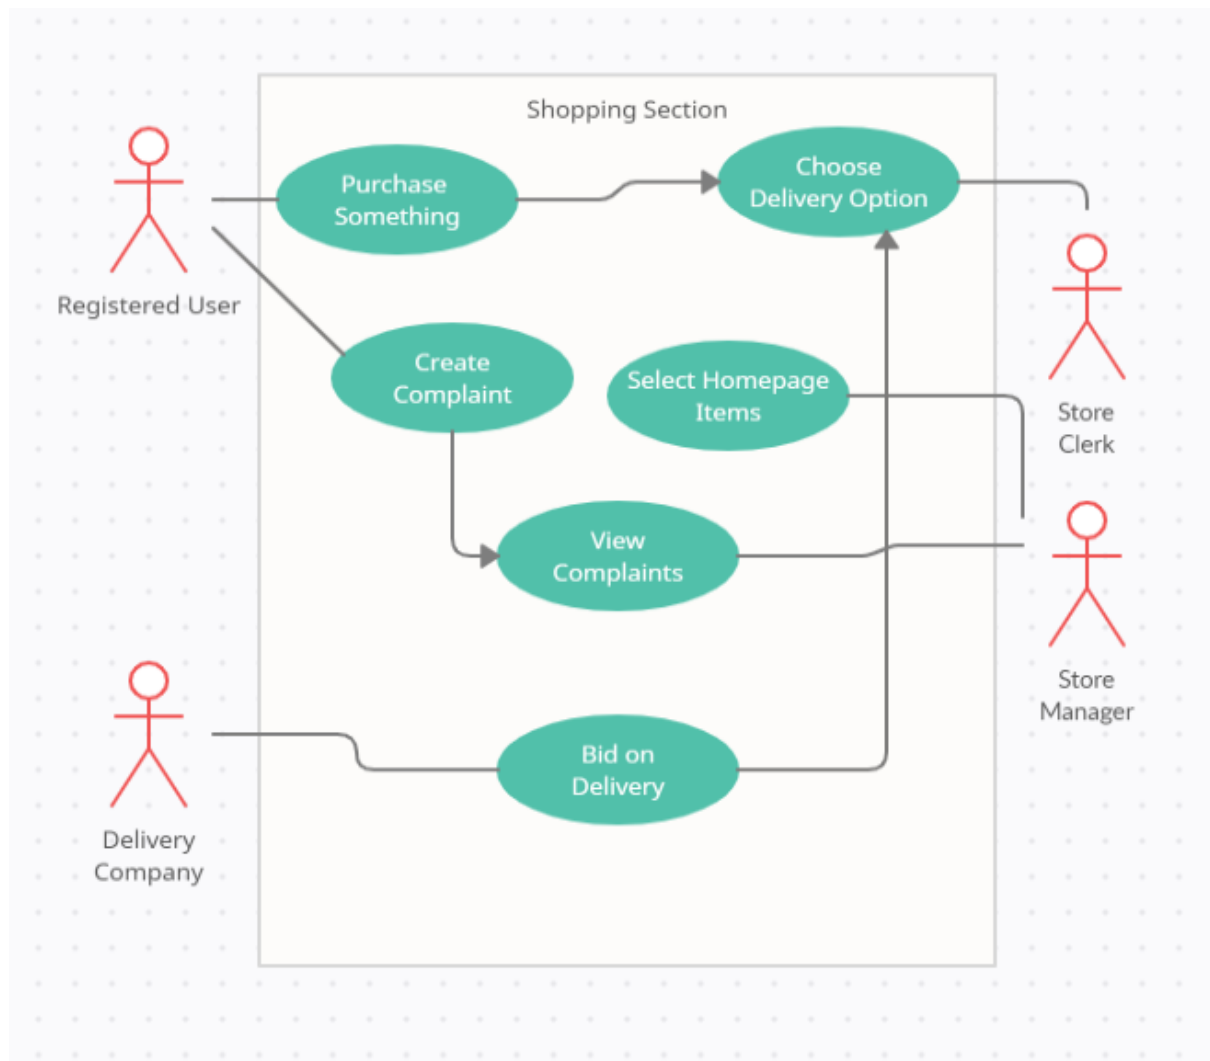

22. a. **Reg Block**- Registered user information is sent to avoid a list if needed.

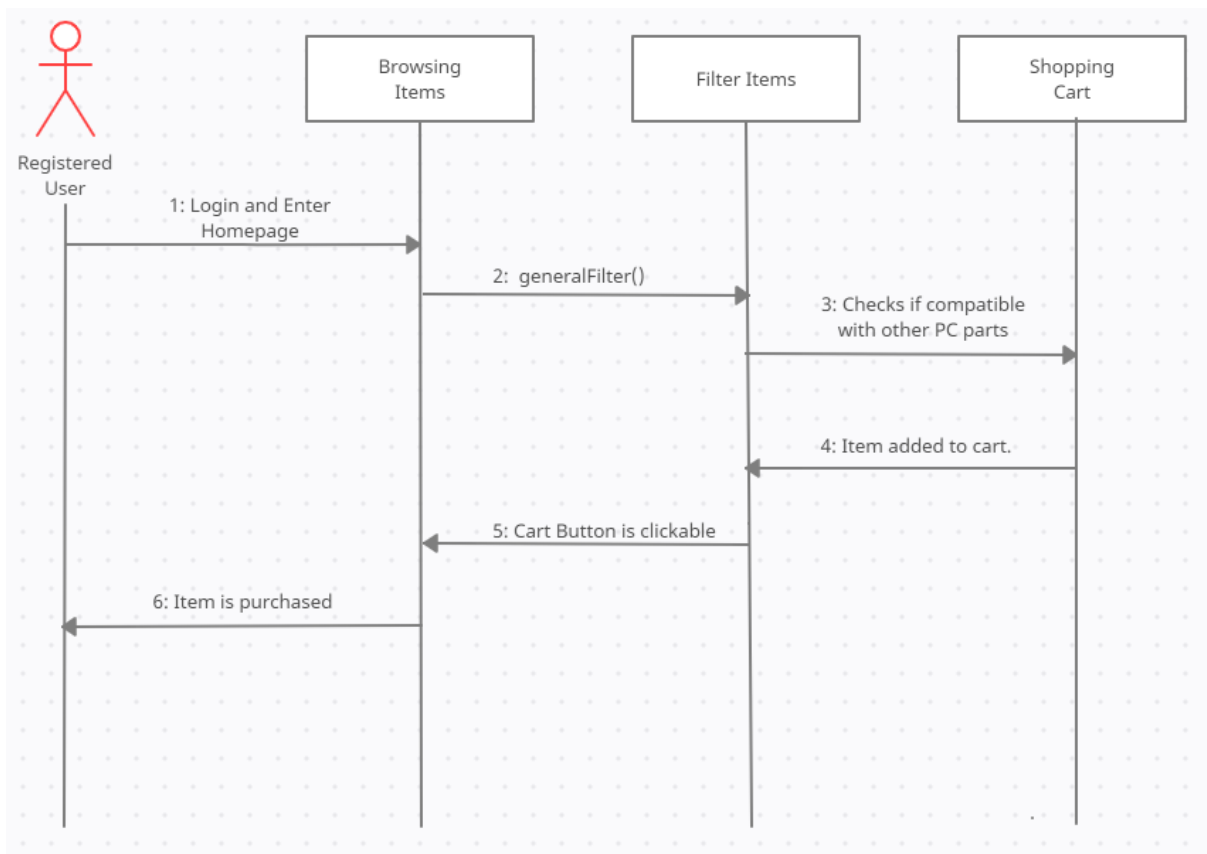

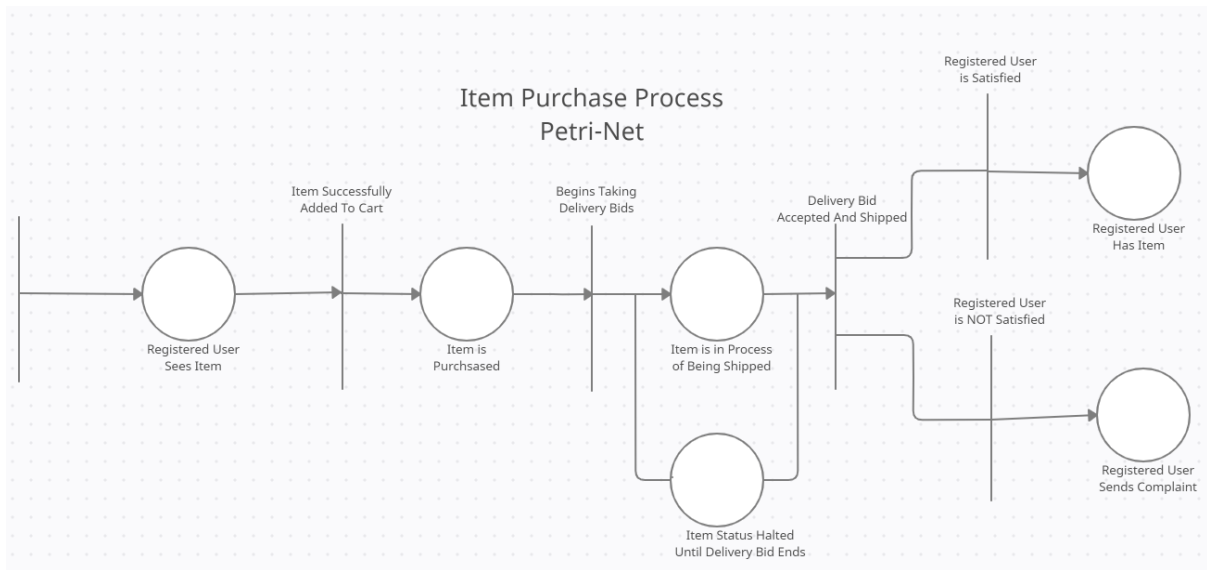

22b. **Reg mes**- User is alerted if they are added to avoid list.

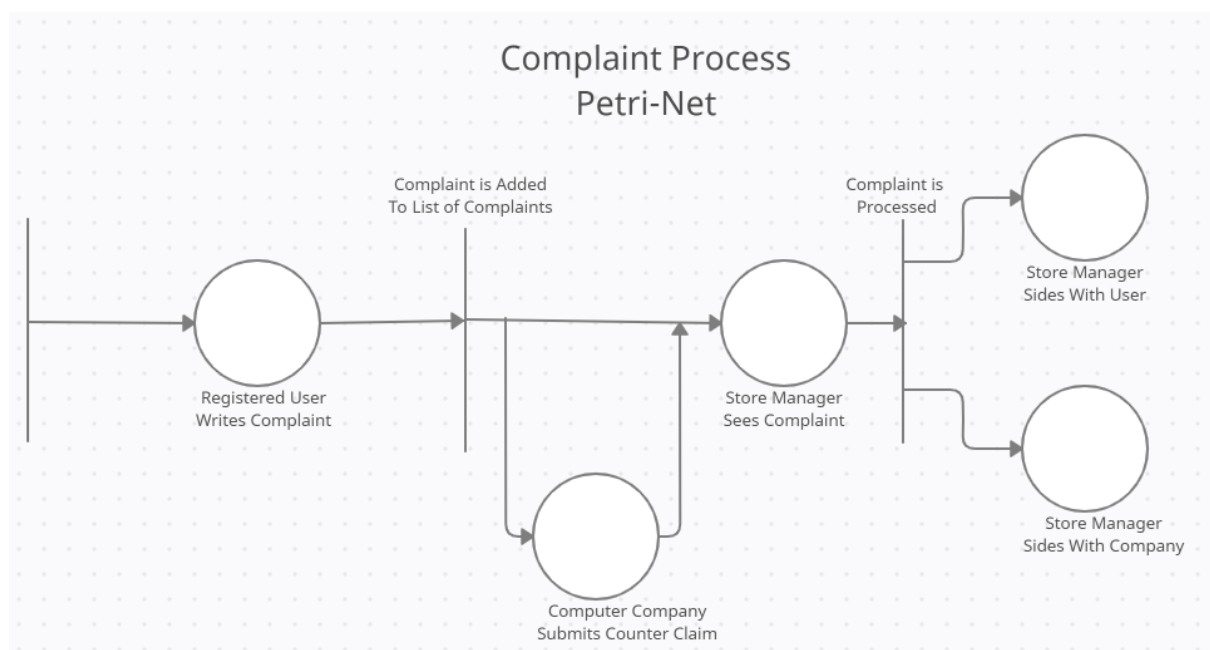

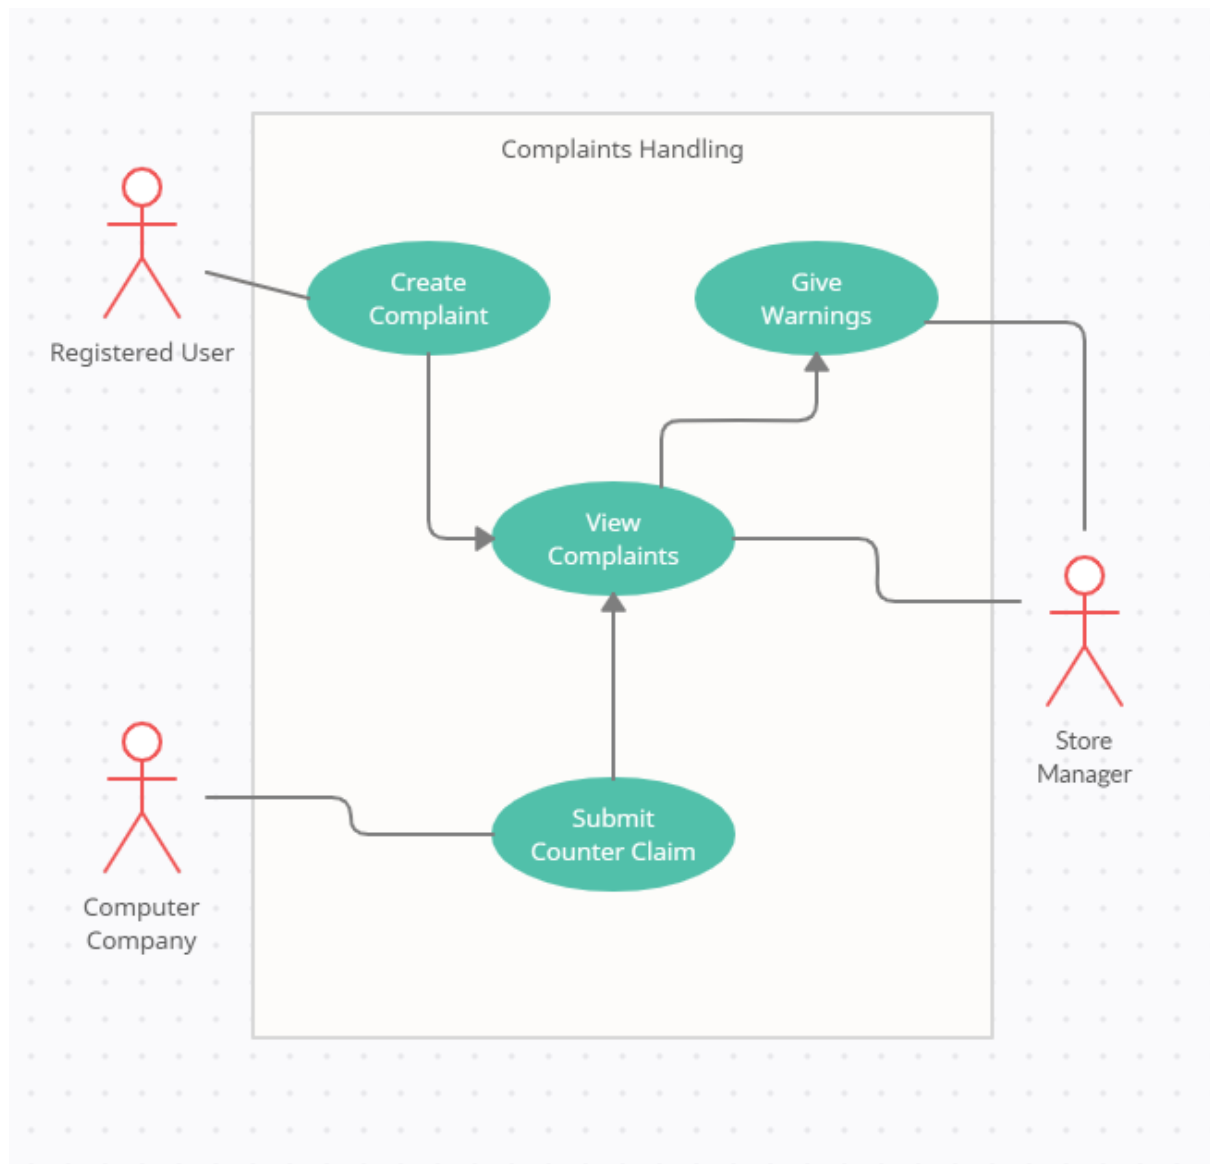

23. **For check**- Registered user information is sent to Forum for access to comment and etc.

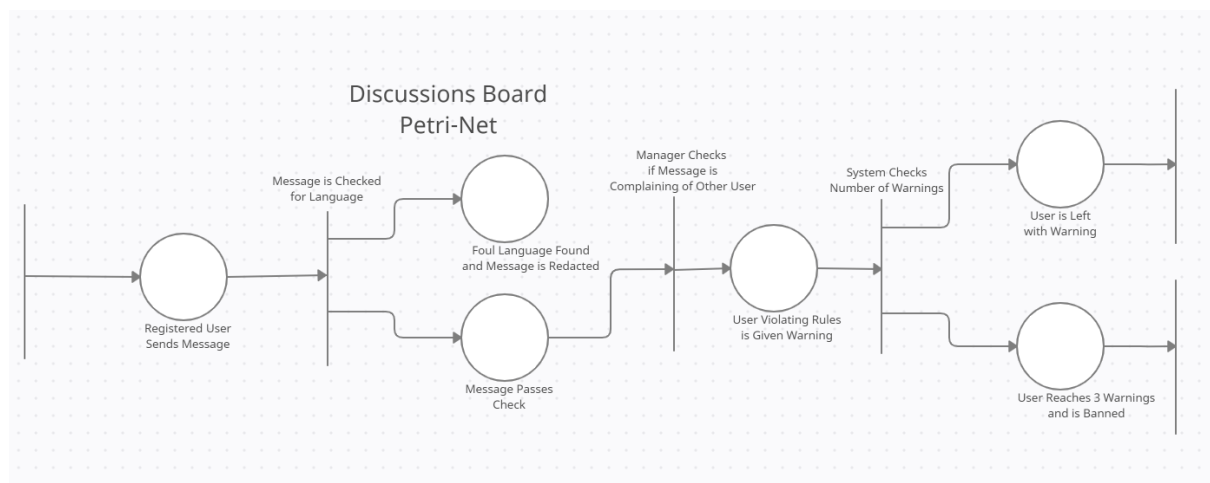

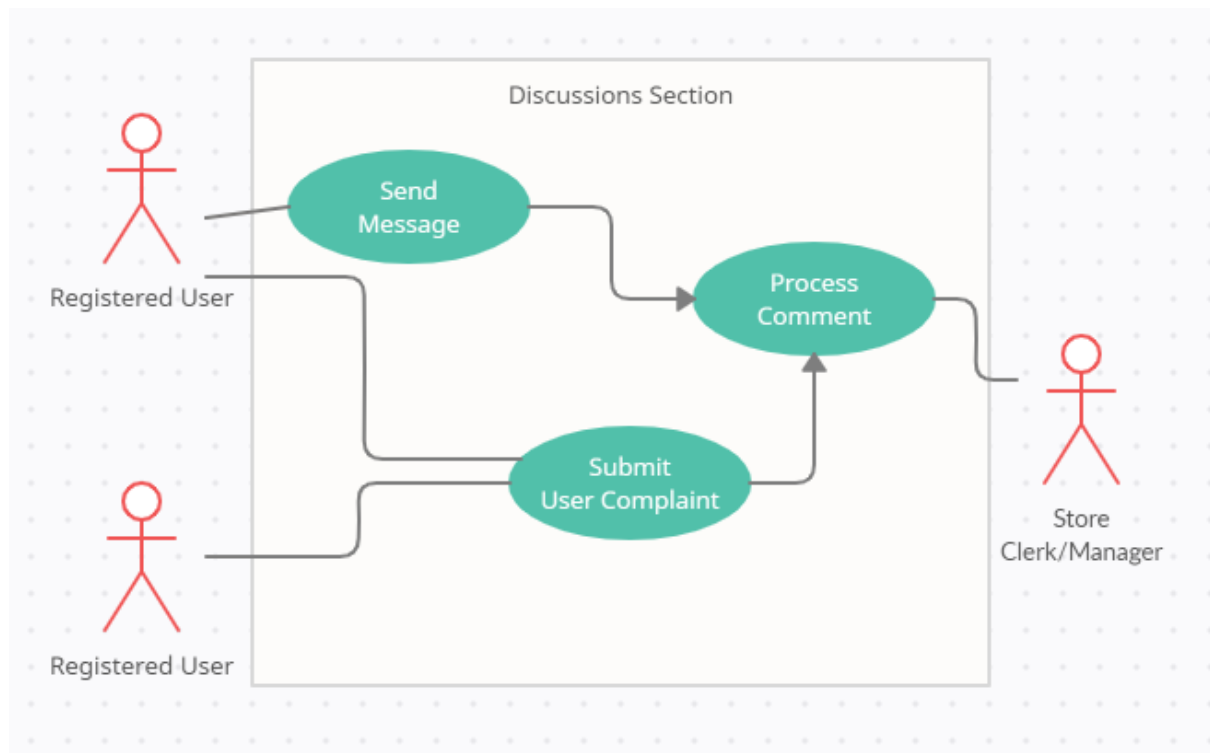

2. Use Cases

3. E-R Diagram

4. Detailed Design

Initialization Methods

```
def initialization( self, name, company, price)
```

```
    set Self.name to name
```

```
    set Self.company to company
```

```
    set Self.price to price
```

```
def initialization of login( self, userName, password)
```

```
    set Self.userName to userName
```

```
    set Self.password to password
```

```
def variables as strings (self)
```

```
    Return self.itemType + self.name + self.company + self.price
```

```
def variables as strings for login(self)
```

```
    Return self.itemType + self.userName + self.password + self.warnings +  
self.suspended
```

```
def returnRandomCompany
```

```
    set Random value to random.randint(0,2)
```

```
    if RandomValue is equal to 0
```

```
        return "Msi"
```

```
    elif randomValue equal to 1
```

```
        return "Intel"
```

```
    else:
```

```
        return "AMD"
```

Filter Methods

```
def matchKeywordsFilter(itemList, attributes are None, keywords are None)
```

```
    if (attributes equals None or keywords equals None) or (length of attributes does not equal  
length of keywords)):
```

```
        return []
```

```
    filteredList = []
```

```
    start a for loop for item in itemList
```

```
        start a nested for loop for attribute in range
```

```
            attributeReturn = getattr(item, attributes[attribute])
```

```
            if attributeReturn equals keywords[attribute]:
```

filteredList adds (item)

return filteredList

def rangeFilter(itemList, attribute, lowerBound, upperBound):

filteredList is empty

start a for loop for every item in itemList

set attributeReturn equal to getattr(item, attribute)

conditional statement that if lowerBound <= attributeReturn <= upperBound

filteredList adds (item)

return filteredList

def generalFilter(itemList, filterList)

filteredList is empty

if the length of filterList equals 0

return itemList

elif filterList[0][0] equals 'match'

attributes is set to filterList[0][1]

Keywords is set to filterList[0][2]

filteredList is left empty

Call matchKeywordsFilter

Remove filterList index (0)

return generalFilter(filteredList, filterList)

elif filterList[0][0] equals "range":

attribute is set to filterList[0][1]

lowerBound is set to filterList[0][2]

upperBound is set to filterList[0][3]

filteredList is still left empty

Call rangeFilter

Remove filterList index (0)

return generalFilter

Reading Method

```
def reader (accounts_txt)
    file set equal to accounts_txt
    start for loop for every line in file
        data is equal to lines being split by "+"
        print data

        set product id equal to data[0]
        set price equal to data[1]
        set description equal to data[2]
        set numbers old equal to data[3]
        set current product equal to accounts (product, price, description, number sold)
        Add current product to accountsList

    close file
```
